

1. Summary
 - Purpose: A secure centralized project management web app for internal task tracking
 - Timeline: Target completion by mid June
2. Project Objectives
 - Centralized task management using a Kanban style board
 - Secure user access with role based permissions
 - To provide a well documented backend API
3. Project scope
 - JWT authentication, Project workspace, task status tracking and interactive API documentation
4. Functional Requirements
 - Identity Access Management: User registration, secure login sessions and role validation
 - Workspace management: CRUD operation on project workspace, assigning team members
 - Task functions: creating tasks, assigning due dates, priority categorization and updating of statuses
5. Non functional requirements
 - Security: Password hashing and secure token validation for every request
 - Relational database storage to ensure zero data loss
 - Automated interactive API endpoints for seamless frontend integration
6. Technology Stack
 - Backend: Fast API, SQLite, SQLAlchemy, PyJWT
 - Frontend: React.js
